## Mathematical Spellings 3.

1) $A$ $\qquad$ is the number on the top of a fraction.
2) An $\qquad$ angle is more than 90 degrees but less than 180 degrees.
3) An $\qquad$ number is not even and does not divide by 2 .
4) $\qquad$ lines never meet.
5) A $\qquad$ is a shape with five sides.
6) A $\qquad$ is a fraction using $1 / 100$. eg. $20 / 100=20 \%$
7) The $\qquad$ is the distance around the sides of a shape.
8) Lines are $\qquad$ if they meet at right angles.
9) A $\qquad$ is a sort of circular graph.
10) $A$ $\qquad$ is any shape with straight sides.
11) $A$ $\qquad$ is a number with only two factors, 1 and the number itself.
12) $\qquad$ is the measure of how likely an event is.
13) The $\qquad$ is the answer when you multiply.
14) $A$ $\qquad$ is a shape with 4 straight sides.
15) The $\qquad$ is the answer when you divide.
16) The $\qquad$ of a circle is the distance from the centre to the outside.
17) A $\qquad$ is used to compare numbers. (eg. there are 13 boys and 17 girls in a class. The ratio boys to girls is $13: 17$ ).
18) A $\qquad$ is a shape with two pairs of equal sides and four right angles.
19) $A$ $\qquad$ angle is between 180 and 360 degrees.
20) A $\qquad$ angle is $1 / 4$ turn or 90 degrees.
